| Product type | Preventive care |
| Product name | Novrithen® |
| INCI | Aqua • Caprylic/Capric Triglyceride • Glycerin • Pentylene Glycol • Urea • Propylene Glycol • Hydrogenated Lecithin • Oenothera Biennis Oil • Tocopheryl Acetate • Butyrospermum Parkii Butter • Ceramide 3 • Squalane • Lecithin • Tocopherol • Ascorbyl Palmitate • Ascorbic Acid • Xanthan Gum • Sodium Carbomer • Alcohol • Citric Acid |
| Skin demands | Affected and irritated skin demands for effective first-aid measures, as it usually dehydrates very fast and thus becomes very sensitive to external influences. Novrithen®-cream stabilizes the natural hydration balance of the skin and strengthens the skin barrier. As a result, Novrithen®-cream promotes neurodermatitis prevention. |
| Composition | <div style="display: flex; align-items: center;">  <div style="margin-left: 10px;"> <p>Novrithen®-Cream contains urea, evening primrose oil and DMS®. Urea increases skin hydration. Evening primrose oil has a high content of essential fatty acids, especially of gamma-linolenic acid and linoleic acid, which are very important for restoring the natural skin barrier. DMS® is an abbreviation for Derma Membrane Structure, an active agent complex consisting of sebum-compatible triglycerides, shea butter, squalane and phosphatidylcholine (PC; INCI: lecithin). Especially PC, the most important cell membrane component, is an active rebuilding material for the natural skin barrier.</p> <p>Novrithen®-cream is free of mineral oils, preservatives, perfumes, dyes, amines, silicones and above all, free of emulsifiers.</p> </div> </div> |
| Properties | Novrithen® with DMS® is specially designed for the care of the sensitive skin. The cream rebalances disorders of the skin barrier. In addition, the cream is effective against symptoms caused by essential fatty acid deficiencies (vitamin F). It softens the skin and spreads and penetrates very well. |
| Application | It is recommended to apply Novrithen®-cream twice a day on the thoroughly cleansed skin. In cases of dehydrated skin, Novrithen®-cream can be applied more often. An application accompanying skin therapy can be arranged with the dermatologist. Avoid applying the cream on any areas showing signs of skin injuries as the urea content of the cream can cause mild stinging. |
| Shelf life | 30 months at appropriate storage, unopened |

Insect bites

Novrithen® shows an anti-itching activity, if skin has been irritated by insect bites. The irritation comes to an end soon after treatment.
